Course Description

Nowadays the use of the clinical microscope in the dental office is of paramount importance. The use of magnification and illumination opens up a whole new world of possibilities and knowledge. By the use of magnification, we are able to see more details, things that we had been missing in our daily practice of endodontics. This hands-on course has been designed for clinicians with minimal or no knowledge in the use of the clinical microscope. At the end of the presentation, you will recognize the importance of the working position when using a microscope and the ideal position for your dental assistant.

Educational Grants

For their continued support and participation in our sponsored programs, The University of Texas School of Dentistry at Houston gratefully acknowledges KERR ENDODONTICS.

Prescribing Controlled Substances in Texas: Complying with the Rules While Prescribing Safely and Effectively

Arthur H. Jobs, PhD, DMD

Course Description

Recent changes in TSBDE Rules and Regulations require that dental practitioners be able to access the Texas Prescriber Monitoring Program to procure misuse of controlled substances. This course offers strategies for observing applicable rules and regulations pertaining to the prescription, administration and disposal of controlled substances in dental practice, while offering patients safe and effective pharmacotherapy. The recognition and prevention of drug abuse and diversion in dental patients and dental practice will also be presented.

This course meets the TSBDE Dental Treatment of Opiobeneric Sleep Apnea RULE §108.12 which requires a minimum of 3 hours of education in sleep-disordered breathing.

The Eye Cannot See What the Mind Does Not Know: An Oral Mucosal Lesions Refresher Course

Nnigen N. Nwinte, DDS, MMSc, PhD

Course Description

Can you trust your eyes? Have you ever been concerned about a minor, wrong or delayed diagnosis of an oral mucosal lesion? Have you been puzzled about a lesion you saw in the oral cavity and were unsure how to properly describe or label what you saw? Are you sometimes at a loss as to what the likely possibilities are and their clinical implications? How can you tell if the lesion signals the presence of a serious underlying disease and what should you do next? This course will teach you to appreciate the subtle and not-so-subtle differences that exist and be able to correctly distinguish between varying clinical presentations of white patches, colored patches, ulcers, and lumps and bumps encountered in clinical practice. You will also learn about appropriate steps to take in reaching a definitive diagnosis in each clinical scenario.
